                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                bin/display?db=wormace&class=Sequence &object=F22B5
Current sequence finishing criteria for the C. elegans genome sequencing consortium are that all bases are either sequenced unambiguously on both strands, or on a single strand with both a dye primer and dye terminator reaction, from distinct subclones. Exceptions are indicated by an explicit note. IMPORTANT: This sequence is NOT necessarily the entire insert of the specified clone. It may be shorter because we only sequence overlapping sections once, or longer because we arrange for a small content of the specific or the specific or the specific or the specific content or the specific close once, or longer because we arrange for a small content or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the specific or the speci
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Submitted (13-JUL-1995) Louis, MO 63110, USA. E-mail: jes@sanger.ac.uk or rw@nematcode.wustl.edu Coding sequences below are predicted from computer analysis, predictions from Genefinder (P. Green, U. Washington), and ot available information.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The true left end of clone M05D6 is at 25723 in this sequence. The true right end of clone F14E5 is at 4610 in this sequence. The start of this sequence (1. .101) overlaps with the end of sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        factor; Phenylalanyl-tRNA synthetase; RNA binding Caenorhabditis elegans.

Exceptions are indicated by an explicit note. IMPORTANT: This sequence is NOT necessarily the entire insert of the specified clone. It may be shorter because we only sequence overlapping sections once, or longer because we arrange for a small overlap between neighbouring submissions.

IMPORTANT: This sequence is not the entire insert of clone C47G2. It may be shorter because we arrange for a small overlapping sections once, or longer because we arrange for a small overlap between
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           2.2 Mb o
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            bin/display?db=wormace&class=Sequence &object=C47G2
Current sequence finishing criteria for the C. elegans genome sequencing consortium are that all bases are either sequenced unambiguously on both strands, or on a single strand with both a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Coding sequences below are predicted from computer analysis, using predictions from Genefinder (P. Green, U. Washington), and other

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       AAAGGTATCAACGGTTTCGGAATCACAGGTCCATTTGTGATAAACTGGTTGGCCAATGGT 16
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         overlapping sections once, or longer because we arrange for a small overlap between neighbouring submissions.

This sequence is the entire insert of clone F53F1. The true right end of clone M04G12 is at 21759 in this sequence. The start of this sequence (1..101) overlaps with the end of sequence Z81103. The end of this sequence (39379..39478) overlaps with the start of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             bin/display?db=wormace&class=Sequence &object=F53F1
Current sequence finishing criteria for the C. elegans genome sequencing consortium are that all bases are either sequenced unambiguously on both strands, or on a single strand with both dye primer and dye terminator reaction, from distinct subclones.

Exceptions are indicated by an explicit note.

                                                                                                                                                                                                                                                                                                                   current sequence finishing criteria for the C. elegans genome sequencing consortium are that all bases are either sequenced unambiguously on both strands, or on a single strand with both a dye primer and dye terminator reaction, from distinct subclones. Exceptions are indicated by an explicit note. IMPORTANT: This sequence is NOT necessarily the entire insert of the specified clone. It may be shorter because we only sequence overlap between neighbouring submissions.

IMPORTANT: This sequence is not the entire insert of clone E04D5.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The end of this sequence (31437.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     start of this sequence (1. .104) overlaps with the end of sequence                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Current sequence finishing criteria for the C elegans genome sequencing consortium are that all bases are either sequenced unambiguously on both strands, or on a single strand with both a dye primer and dye terminator reaction, from distinct subclones. Exceptions are indicated by an explicit note.

IMPORTANT: This sequence is NOT necessarily the entire insert of the specified clone. It may be shorter because we only sequence overlapping sections once, or longer because we arrange for a small content of the specific or the specific or sequence overlapping sections once, or longer because we arrange for a small content of the specific or longer because we arrange for a small content of the specific or longer because we arrange for a small content of the specific or longer because we arrange for a small content of the specific or longer because we arrange for a small content of the specific or longer because we arrange for a small content of the specific or longer because we arrange for a small content of the specific or longer because we arrange for a small content of the specific or longer because we arrange for a small content or longer because we arrange for a small content or longer because we arrange for a small content or longer because we arrange for a small content or longer because we arrange for a small content or longer because we arrange for a small content or longer because we arrange for a small content or longer because we are longer because we are longer because we are longer because we are longer because we are longer because we are longer because we are longer because we are longer because we are longer because we are longer because we are longer because we are longer because we are longer because we are longer because we are longer because we are longer because we are longer because we are longer because we are longer because we are longer because we are longer because we are longer because we are longer because we are longer because we longer because we are longer because we are longer because
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   sequence Z81523.

The true left end of clone F32H2 is at 32306 in this sequence. The true right end of clone T08G11 is at 7984 in this sequence. The start of this sequence (1. .105) overlaps with the end of sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Submitted (21-OCT-1996) Louis, MO 63110, USA. E-mail: jes@sanger.ac.uk or rw@nematode.wustl.edu Coding sequences below are predicted from computer analysis, using predictions from Genefinder (P. Green, U. Washington), and other available information.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         bin/display7db-wormace&class=Sequence &object=R07E3
Current sequence finishing criteria for the C. elegans genome sequencing consortium are that all bases are either sequenced unambiguously on both strands, or on a single strand with both a dye primer and dye terminator reaction, from distinct subclones. Exceptions are indicated by an explicit note.

EXCEPTIONS THIS sequence is NOT necessarily the entire insert of the specified clone. It may be shorter because we only sequence overlapping sections once, or longer because we arrange for a small overlap between neighbouring submissions.

This sequence is the entire insert of clone R07E3. The true right end of clone F41E7 is at 36774 in this sequence. The start of this sequence (1. .115) overlaps with the end of sequence Z68106.

The end of this sequence (39633. .39736) overlaps with the start of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Wilson, R., Ainscough, R., Anderson, K., Baynes, C., Berks, M., Bonfield, J., Burton, J., Connell, M., Copsey, T., Cooper, J., Coulson, A., Craxton, M., Dear, S., Du, Z., Durbin, R., Favello, A., Fulton, L., Gardner, A., Green, P., Hawkins, T., Hillier, L., Jier, M., Johnston, L., Jones, M., Kershaw, J., Kirsten, J., Laister, N., Latreille, P., Lightning, J., Lioyd, C., McMurray, A., Mortimore, B., O'Callaghan, M., Parsons, J., Percy, C., Rifken, L., Roopra, A., Saunders, D., Shownkeen, R., Smaldon, N., Smith, A., Sonnhammer, E., Staden, R., Sulston, J., Thierry, Mieg, J., Thomas, K., Vaudin, M., Vaughan, K., Waterston, R., Watson, A., Weinstock, L., Wilkinson-Sproat, J. and Wohldman, P.
